PRODUCT PROFILE

**GENERIC DESCRIPTION**
Modified Polyamine Epoxy

**COMMON USAGE**
A low ambling, multi-purpose epoxy coating that can be used as a primer, broadcast, slurry/broadcast, mortar, grout coat, and topcoat. It provides excellent application properties with good flow and self-leveling characteristics and protects concrete surfaces from impact, abrasion and mild chemicals with an aesthetically pleasing appearance.

**COLORS**
Supplied as a clear coat, may be field tinted with Series 821 in 16 StrataShield colors. Contact your Tnemec representative for additional information. Decorative Quartz is available in 12 standards colors, refer to the StrataShield Decorative Quartz Color card for more information. Custom colors are also available: Note: extended exposure to UV and artificial lighting. Lack of ventilation, incomplete mixing, miscalculation or the use of heaters that emit carbon dioxide and carbon monoxide during application and initial stages of curing may cause amine blush, possibly affecting adhesion of subsequent topcoats.

**FINISH**
Series 206, 215. **Note:** A repair kit of 201, with Part C fumed silica, is available for small patching/surfacing repairs. For more extensive repairs and additional information, contact your Tnemec representative or Tnemec Technical Services.

**RECOMMENDED DFT**
Concrete: Series 247, 248, 254, 285, 294, 295, 296. **Note:** If Series 247, 248, 285, 294, 295 or 296 is selected for the finish coat, an intermediate coat of Series 284 is required. Refer to the StrataShield Installation and Application guide for more information.

**PACKAGING**

<table>
<thead>
<tr>
<th>Package Type</th>
<th>Unit Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extra Large Kit</td>
<td>2-55 gallon drums</td>
</tr>
<tr>
<td>Large Kit</td>
<td>2-5 gallon pails</td>
</tr>
<tr>
<td>Small Kit</td>
<td>2-1 gallon cans</td>
</tr>
</tbody>
</table>

**YIELD (mixed)**
165 gallons

**NET WEIGHT PER GALLON**
9.33 ± 0.25 lbs (4.23 ± .11 kg) mixed

TECHNICAL DATA

**VOLUME SOLIDS**
100% (mixed)

**RECOMMENDED DFT**
Minimum of 1/8". Requires two broadcast applications at 1/16" each or applied as a slurry broadcast.

**CURING TIME**

<table>
<thead>
<tr>
<th>Temperature</th>
<th>To Topcoat/Broadcast</th>
<th>To Place in Service</th>
</tr>
</thead>
<tbody>
<tr>
<td>75°F (24°C)</td>
<td>12 to 24 hours</td>
<td>24 hours</td>
</tr>
</tbody>
</table>

**Note:** If more than 24 hours have elapsed between coats, the coated surface must be mechanically abraded before topcoating. **Note:** There is no maximum recoat time if aggregate has been broadcast to refusal into the preceding coat. Curing time varies with surface temperature, air movement, humidity and film thickness.

**VOC**
Unthinned: 0.13 lbs/gallon (15 grams/litre)
1.604 mil sq ft/gal (39.4 m²/L at 25 microns). See APPLICATION for coverage rates.

**THEORETICAL COVERAGE**

**NUMBER OF COMPONENTS**
The Part C colored quartz aggregate is based on a nominal amount calculated at one-half pound per sq ft (2.4 kg/m²) per broadcast application or one pound per sq ft (4.8 kg/m²) for a double broadcast. Additional colored quartz aggregate may be required to accommodate for waste or loss during application or to make coving material.

**COLORANT**
Series 821 field applied colorants are available from Tnemec in 16 StrataShield colors and certain custom colors. Colorants should be added at 4 oz. to 8 oz. per gallon of mixed clear liquids for intermediate or base coats and up to 8 oz. per gallon for finish coats. **Note:** Color consistency and hiding may vary based on the color selected and amount of colorant used.

**APPLICATION**
Prepare surfaces by method suitable for exposure and service. Refer to the appropriate primer data sheet for specific recommendations.

**CONCRETE**
Allow new poured-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness in accordance with ASTM F 1869 ‘Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride’ (moisture vapor transmission should not exceed three pounds per 1,000 square feet in a 24 hour period), F 2170 ‘Standard Test Method for Determining Relative Humidity in Concrete using in situ Probes’ (relative humidity should not exceed 80%), or D 4265 ‘Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method’ (no moisture present). **Note:** The testing listed above cannot guarantee avoidance of future moisture related problems particularly with existing concrete slabs. This is especially true if the use of an under slab moisture vapor barrier cannot be confirmed or concrete contamination from oils, chemical spills, unreacted silicates, chlorides or Alkali Silica Reaction (ASR) is suspected.

Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast, water jet or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 or greater surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer. **Note:** For moisture content exceeding 3 lbs per 1,000 sq ft or relative humidity in excess of 80%, Series 208 or 241 may be substituted for the primer. Refer to the Series 208 or 241 product data sheet for more information.

**ALL SURFACES**
Must be clean, dry and free of oil, grease and other contaminants.

**DECO-TREAD® SERIES 222**
PRODUCT DATA SHEET

© January 16, 2019 by Tnemec Company, Inc. Published technical data and instructions are subject to change without notice. The online catalog at www.tnemec.com should be referenced for the most current technical data and instructions or you may contact your Tnemec representative for current technical data and instructions.

**APPLICATION**

**COVERAGE RATES**

Before commencing, obtain and thoroughly read the StrataShield Installation and Application Guide for floors.

The mixed liquids (Part A and B) are spread at a rate of 80 sq ft (7.4 m²) per gallon or approximately 20 mils (510 microns) wet. The colored quartz aggregate is then broadcast into the liquid until a uniformly dry appearance is obtained. After the first broadcast layer cures, forming a thickness approximately 1/16’’ (1.6 mm) thick, the excess colored quartz is removed and a second application is repeated to obtain a minimum thickness of 1/8” (3.2 mm).  

**Note:** A double broadcast is required to achieve the 1/8” (3.2 mm) minimum. For slurry application instructions and spreading rates contact your Tnemec representative.

**MIXING**

Use a variable speed drill with a PS Jiffy blade. Slowly mix 2 parts A component, and while under agitation add 1 part B component and mix for a minimum of two minutes. Ensure that all Part B is blended with Part A by scraping the pail walls with a flexible spatula.  

**Note:** A large volume of material will set up quickly if not applied or reduced in volume.  

**Caution:** Do not reseal mixed material. An explosion hazard may be created.

**Field Colorant:** Mix thoroughly using a variable speed drill with a PS Jiffy blade at a rate of 4 oz. to 8 oz. per gallon of mixed liquids.

**THINNING**

Normally not required.

**POT LIFE**

25 to 30 minutes at 75°F (24°C)

**APPLICATION EQUIPMENT**

Squeegee or trowel and backroll. For detailed instructions, refer to the StrataShield Installation and Application Guide for floors.

**SURFACE TEMPERATURE**

Minimum of 55°F (13°C), optimum 65°F to 80°F (18°F to 27°C), maximum of 90°F (32°C). The substrate temperature should be at least 5°F (3°C) above the dew point. To avoid outgassing, concrete temperature should be stabilized or in a descending temperature mode. Material should not be applied in direct sunlight.

**MATERIAL TEMPERATURE**

For optimum application, handling and performance, the material temperature during application should be between 70°F and 90°F (21°C and 32°C). Temperature will affect the workability. Warm temperatures will decrease viscosity and shorten pot life.

**CLEANUP**

Flush and clean all equipment immediately after use with xylene or MEK.
