

KOHL'S DEPARTMENT STORE, INCORPORATED

FEATURED PRODUCTS

Series 607 Conformal Stain

At 89,000 sq.ft., the new Kohl's Department Store in Oswego, IL is the anchor tenant of what will be the largest retail center in Kendall County. Located 35 miles west of Chicago, growth in Oswego has been rapid and the new Kohl's store is part of a development of 150 acres that was previously farmland.

Chemprobe's Series 607 Conformal Stain was used to protect the exterior of the building. According to Chemprobe/Tnemec coating consultant Chris Wascher, the architect chose Conformal Stain because of the desire to have a penetrating material applied to the substrate. A solvent-based acrylic, Series 607 exhibits excellent color stability, does not alter the natural texture of the surface, and is designed not to peel or flake when applied to a properly prepared substrate.

The department store's exterior surface was prepared by pressure wash cleaning. Two coats of Conformal Stain were applied by airless spray equipment to all split face block. An additional coat of Series 607 was used to coat the banding (accent areas), and another additional coat was used to coat the ledgerstone (exterior block from grade up to four feet).

Other stores to be built include a 30,000 sq.ft. Best Buy; a 50,000 sq.ft. Dick's Sporting Goods; and a 10,000 sq.ft. Ulta store. Like Kohl's, all are scheduled to be coated with Conformal Stain using the same color scheme to provide a uniform color appearance for the entire retail center.

PROJECT INFORMATION

Project Location

Oswego, Illinois

Project Completion Date

August 2006

Owner

Kohl's Department Store, Inc.
