CONTINUING EDUCATION COURSES

Tnemec representatives have offered their expertise for decades by presenting face-to-face coatings courses for architects, engineers, specifiers and contractors. Participants can choose to complete courses for AIA, NCEES and/or GBCI credits about a variety of subjects, including coatings for floors and walls, surfaced masonry wall systems, architectural steel protection and more.

Visit www.tnemecuniversity.com to schedule an in-person presentation with your local Tnemec representative.

MITIGATING THERMAL BRIDGING WITH FLUID-APPLIED COATINGS
Thermal bridging can significantly impact a building envelope’s performance. Learn how fluid-applied coatings can minimize thermal bridging in new and existing buildings without altering the structural design while saving time and money.
TNE015: 1.0 LU | HSW | GBCI 0920004918

OVERCOATING AGED METAL PANELS: PROVIDING AESTHETICS WHILE EXTENDING THE MAINTENANCE CYCLE
Discover the benefits and procedures for overcoating aged metal cladding and roofing with a high-performance coating system. The presentation will discuss the reasons for overcoating, the necessary surface preparation, and the differences in the coating technologies available on the market.
TNE016: 1.0 LU | HSW

BEYOND COLOR AND GLOSS: OTHER BENEFITS OF FEVE FLUOROPOLYMER TECHNOLOGY
Learn about the well-known benefits of using FEVE Fluoropolymer technology, such as color and gloss performance, as well as lesser-known attributes of these coatings that contribute to their overall value.
TNE017: 1.0 LU | HSW

HIGH-PERFORMANCE PROTECTION FOR FLOOR AND WALLS
Epoxy and urethane floor and wall systems continue to gain popularity in the commercial, institutional and industrial markets due to their durability, versatility and seamless installation. Learn about the importance of high-performance floor and wall systems, proper surface preparation, material selection and specification.
TNE021: 1.0 LU | HSW

SELECTING EXTERIOR TOPCOATS BASED ON AESTHETIC PERFORMANCE
Learn about the aesthetic performance of the most common types of topcoats, how to examine the effects of UV exposure on color and gloss retention, and how to select and specify topcoats based on expected levels of gloss and color retention performance.
TNE022: 1.0 LU | HSW

INSULATING COATINGS POWERED BY AEROGEL PARTICLES
Aerogel is widely recognized as the best insulating solid in the world. Coatings formulated with aerogel particles are a popular alternative to traditional methods of insulation. This innovative breakthrough greatly enhances the thermal efficiency of insulation coatings, making them an attractive option for a broad spectrum of applications in many buildings.
TNE023: 1.0 LU | HSW

THE TRUE VALUE OF HIGH-PERFORMANCE COATINGS
Learn how to determine the true value of coatings and the importance of quality by evaluating performance characteristics and life-cycle costs. Discover how to include high-performance coatings in specification through the review of case studies and test standards.
TNE024: 1.0 LU | HSW
